Superb image quality for video surveillance in any environment

- > HDTV and 5 megapixel
- > Lightfinder
- > P-Iris control
- > Digital PTZ and multi-view streaming
- > Outdoor ready

The indoor and outdoor-ready AXIS P13 Network Camera Series, with their superb image quality, are ideal for high-performance surveillance in any environment.

AXIS P13 Series delivers multiple H.264 and Motion JPEG video streams. The cameras range from SVGA up to 5 megapixel resolution, including HDTV 720p and 1080p video. Features like wide dynamic range and day and night functionality provide superb image quality in daylight and dark conditions.

The SVGA and HDTV 720p models support Axis' Lightfinder technology, which makes these cameras extremely sensitive to low light. The P-Iris control on HDTV 1080p and 5-megapixel cameras guarantee precise control of the iris position for optimal depth of field and image sharpness.

The remote back focus function enables the focus to be fine-tuned from a computer. All models also offer digital pan/tilt/zoom, and the HDTV 1080p and 5-megapixel cameras additionally provide multi-view streaming. All cameras feature a serial port for communication with auxiliary equipment such as pan/tilt head in order to remotely change the camera direction.

AXIS P13 cameras support Power over Ethernet (PoE) and the outdoor-ready models operate using PoE and High PoE in temperatures from -40 °C to 50 °C (-40 °F to 122 °F).

## High-performance indoor/outdoor cameras

AXIS P13 Series offers fixed network cameras suitable for a range of video surveillance applications, including government and industrial buildings, retail environments, airports, railway stations and schools.

### Easy installation with focus assistant, remote focus and pixel counter

Setting the focus on all AXIS P13 cameras is made easy with the focus assistant, which indicates with a flashing green LED when an image is in focus after manually adjusting the lens. Additionally, the cameras offer remote back focus, which allows the focus to be fine-tuned from a computer. The pixel counter further helps the installer verify that the pixel resolution of an object fulfills regulatory or customer requirements, for example, for facial identification.

### Digital PTZ and multi-view streaming

All camera models support digital pan/tilt/zoom, which allows a selected area of interest to be cropped from the full view for viewing or recording, thereby minimizing the bit rate and storage needs. The HDTV 1080p and 5-megapixel cameras also support multi-view streaming, which allows several cropped view areas to be streamed simultaneously, simulating up to eight virtual cameras.

### Lightfinder technology

AXIS P1353/-E and P1354/-E Network Cameras incorporate Axis' unique Lightfinder technology. The outstanding light sensitivity, with maintained colors even in very poor lighting conditions, is obtained by a combination of Axis' expertise in image processing, system-on-chip development and selection of the best optical components.

### P-Iris control

AXIS P1355/-E and P1357/-E feature the advanced precise iris control that comprises a special P-Iris lens, together with dedicated software in the camera, to set the best iris position for optimal depth of field, resolution, image contrast and clarity. Good depth of field implies that objects at different distances from the camera are in focus simultaneously.

### Outdoor-ready models

AXIS P13-E Network Cameras save installation time and costs since they are ready out of the box for mounting outdoors. The IP66-rated cameras have protection against dust, rain, snow and sunlight, and can operate in temperatures as low as -40 °C (-40 °F).

The cameras are powered by Power over Ethernet, which makes installation easy since there is no need for a separate power cable. An integrated dehumidifying membrane eliminates any humidity caught in the camera enclosure during installation. The cameras enable easy mounting of an infrared illuminator under the enclosure. They come with a wall mount bracket, sunshield and cable glands.
